

Winterization checklist

BIKE DETAILS

Make & model

Plate

Date

Mileage

BEFORE YOU PARK IT

- ☐ Wash the bike, dry it fully, wax the paint
- ☐ Change the oil and filter - used oil holds acids and water
- ☐ Clean and lube the chain
- ☐ Check coolant and antifreeze strength
- ☐ Fill the tank and add fuel stabilizer (ethanol pulls in water)
- ☐ Carbureted bike: drain the float bowls
- ☐ Check brake fluid - level and age

STORAGE SPOT

- ☐ Dry and above freezing if you can, not straight onto cold concrete
- ☐ Put it on stands, or raise tire pressure to the sidewall maximum
- ☐ Breathable cover, never airtight plastic (it sweats)
- ☐ Plug the exhaust - moisture and rodents

BATTERY

- ☐ Disconnect it, or hook up a trickle charger / battery tender
- ☐ Not a plain full-rate charger left on - that does more harm than good
- ☐ Clean and grease the terminals

PAPERWORK

- ☐ Some insurers offer a lay-up or storage policy - worth a call
- ☐ Note when registration renewal falls due
- ☐ Note the next service by date, not just by mileage

COME SPRING, BEFORE THE FIRST RIDE

- ☐ Check tire pressure and tread depth
- ☐ Check brakes and chain tension
- ☐ Refit the battery, test lights and indicators
- ☐ Check oil level and look for leaks
- ☐ Keep the first ride short and gentle, then look it over again

NOTES

Next spring, let Revvo remind you

A sheet of paper won't get in touch in March. Revvo keeps the oil change you did before storage and reminds you when the next service is due. No account, 100% offline. Checklist online: getrevvo.app/en/motorcycle-winterization-checklist/
